Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of nine two-story, two-bay wide vernacular Renaissance Revival-style brick houses with shed roofs and sheet metal cornices were built c. 1900 – 1905. Only two of the houses retain their original brick facades, which were originally painted a dark red; the others have been covered with formstone or stucco.

After the use of wood was outlawed for cornices in 1892, sheet metal became the predominant material used. By the early years of the 20th century, the most popular form of sheet metal cornice sported ball finials and often classical motifs like swags pressed into the frieze area. Generally, only main street two story houses had decorated friezes-the builder saved money on his small street versions by eliminating them. Likewise, while the main street houses in this style would have marble basements, stringers, lintels, and steps, builders used no marble at all on their small street versions, painting the basements white instead. Main street houses would have stained glass transoms over both the door and the wide first floor window; on the small streets builders offered stained glass only in the door transom.

The houses are two stories in height, 12'6" wide and occupy lots 66'7" deep. Each house is three small rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a continuous sheet metal cornice consisting of a crown molding set above a cover molding and a lower ribbed band. Each cornice is framed by two end brackets that have arched caps decorated with rosettes that rise slightly above the roofline.

The tall, narrow window and door openings have segmentally arched brick lintels, with plain tympanums, and wood sills. Some original 1/1 sash survive, others are later replacement sash. Doorways originally had double-light transoms, but most of these are covered over. The row shows a variety of replacement door types. The houses sit on medium-height basements, lit by a single-light sash. Each house is reached by three concrete or marble steps.

Specific dates c. 1900 - 1905

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that there was no stigma attached to small street living. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. A number of German-American owned breweries were also located in this section of the city. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.
